The Customizable RFID Solution for Your Nuclear Power Plant

- We have multiple systems already in use in the nuclear industry.

- Our state of the art FME zone tracking solution has been customized for a variety of other uses such as tool cribs and on-site armories.

- Each item is individually tagged; providing the ability to identify every item.

- Identify the exact item that has been returned to your tool crib or armory, instead of just knowing something has been placed back in a given location.

- The Alphasource solution manages multiple FME zones and tools from a variety of sources, as well as non-RFID enabled devices; no other system can match this technology.

- Our solution helps with safety, accountability, accurate record keeping, tool/weapon maintenance and shrinkage.

- Easily add contractor's tools and non-tagged items to your ToolSaver® system.

- Our cutting edge ToolSaver® system is the ultimate safety and accountability solution for your nuclear power applications.
